**Aim**
To assess access to vaping products, types of products used, and the factors associated with vaping and smoking among young people in New South Wales.

**What did we do?**
- Online cross-sectional survey
- Sample of 721 young people aged 14-17 years
- Recruited through online panels

**How many young people are vaping?**
- 32% of the sample reported being an ever-vaper (n = 233)
- 54% of ever-vapers had never smoked cigarettes prior to starting vaping
- Ever-smokers were 7x more likely to be ever-vapers than those who had never smoked
- Ever-vapers were 18x more likely to be ever-smokers than those who had never vaped

**How do young people access vapes in NSW?**
- 80% of those who didn't buy the vape themselves, reported getting it from a friend
- 49% of those who did buy the vape bought from a friend or 'dealer'
- 31% who did buy the vape bought from a retail store (tobacconist, petrol station, vape or convenience store)

**What products are young people using?**
- 52% used disposable vapes
- 53% used a vape they knew contained nicotine

**Implications for public health?**
Stronger enforcement of federal and state policies designed to protect young people from vaping products is urgently needed.
