

What is chemotherapy?

Visit our website: cancercouncil.com.au/easy-read

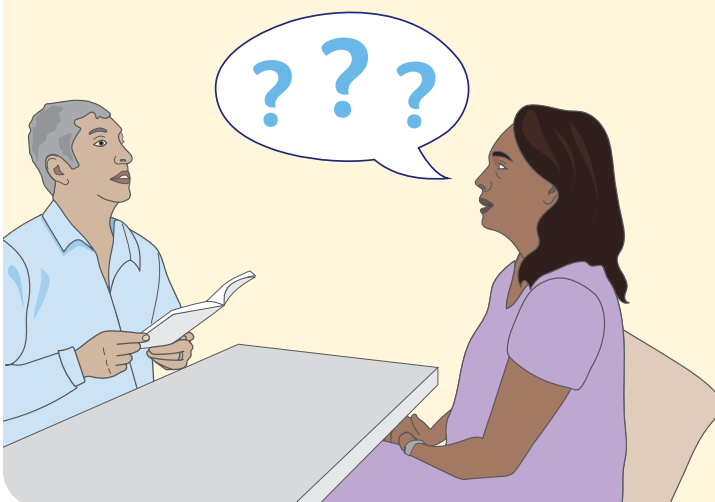

Introduction

This information is about cancer and treatment.

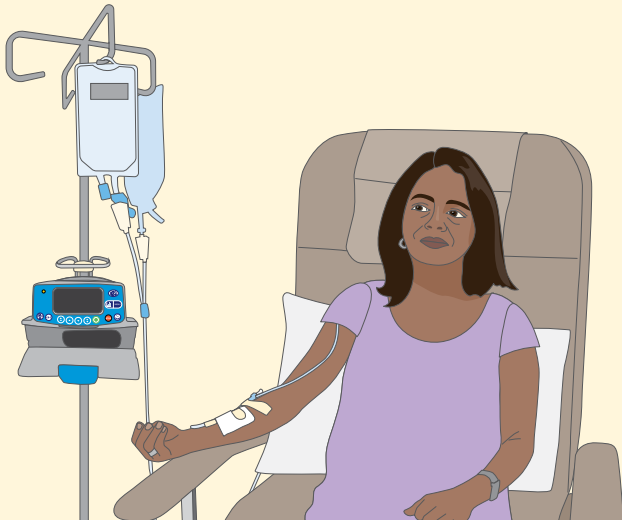

You can ask someone for help to read this information.

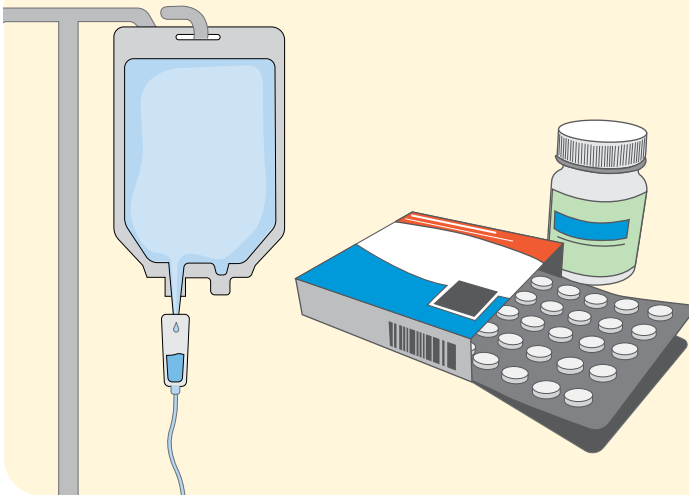

Having **chemotherapy** can feel scary. You can ask your doctor questions about anything you do not understand.

What is chemotherapy?

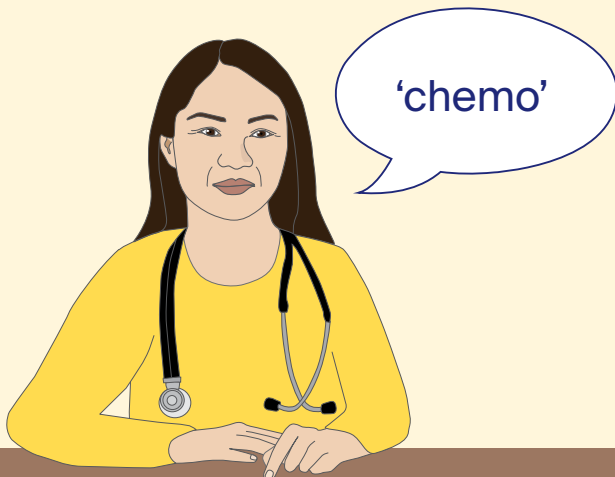

This fact sheet is about **chemotherapy**.

Chemotherapy is treatment for cancer.

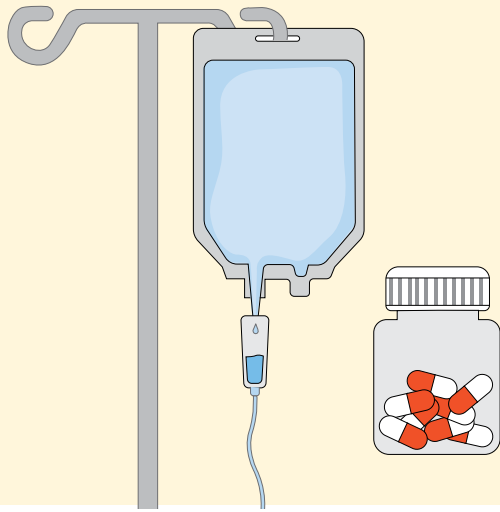

Chemotherapy uses strong medicines to kill cancer.

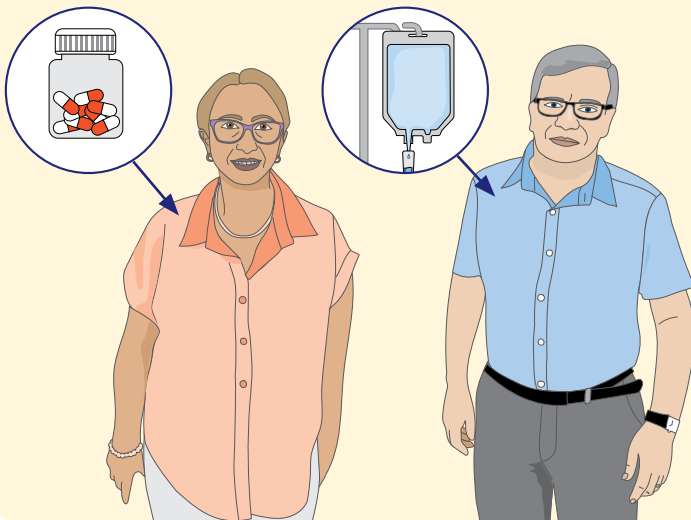

The word '**chemo**' also means chemotherapy.

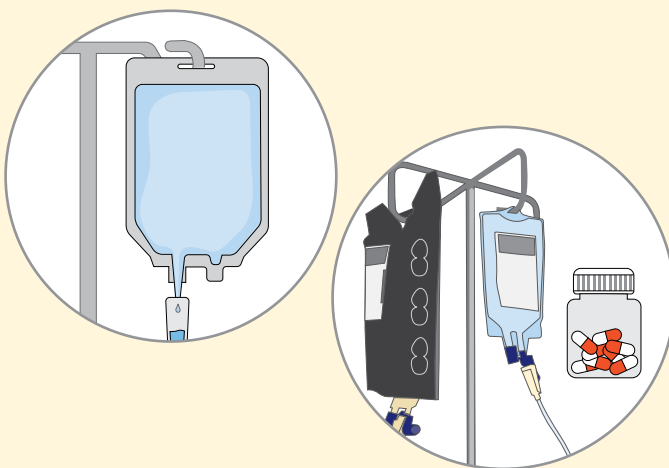

How you get chemotherapy

There are many kinds of chemotherapy medicines.

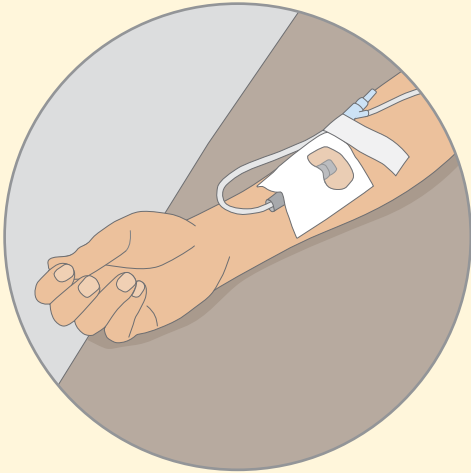

Each person has different medicines. This is because some medicines work better for some types of cancer.

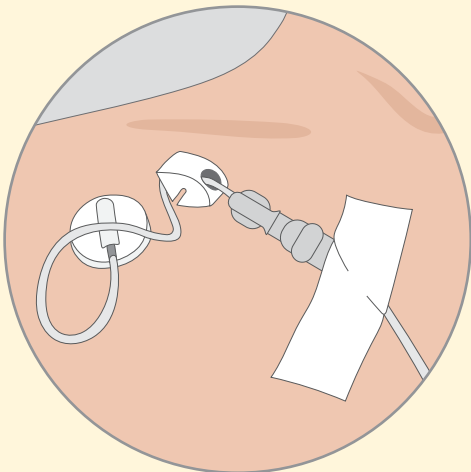

You may have one medicine or several medicines.

How you have chemotherapy

There are different ways to have chemotherapy.

One way is through a vein in your arm. We call this **intravenous (IV) chemotherapy**.

Sometimes you have chemotherapy through a vein in your chest.

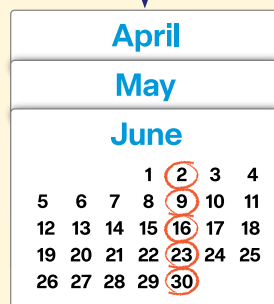

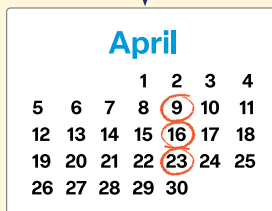

You may also have chemotherapy as tablets that you swallow.

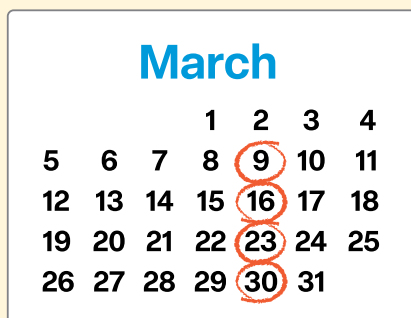

Where you have chemotherapy

You usually go to the hospital or treatment centre for chemotherapy.

You may have treatment for a few weeks or a few months. This will depend on the chemotherapy medicines you are having.

Your medical oncologist will tell you how many times you will have chemotherapy.

During chemotherapy

Different **health professionals** will look after you.

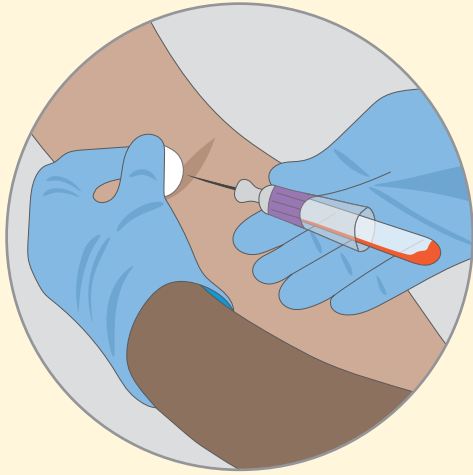

A doctor called a **medical oncologist** plans the chemotherapy.

A chemotherapy **nurse** will give you the chemotherapy medicines.

Having chemotherapy

You will have a blood test before you start chemotherapy. They take blood using a small needle.

Having a blood test and having chemotherapy will not hurt.

You sit in a comfortable chair and wear your own clothes.

It can take a few minutes or a few hours to have chemotherapy. It is different for everyone.

Having chemotherapy can be boring. You can listen to music, read or play a game on your phone.

You can bring someone with you.

You can go home on the same day.

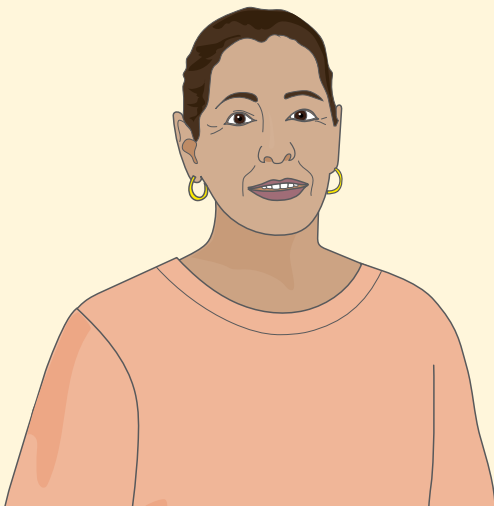

Your doctor will keep checking to see how the treatment is working. Sometimes they might change your treatment.

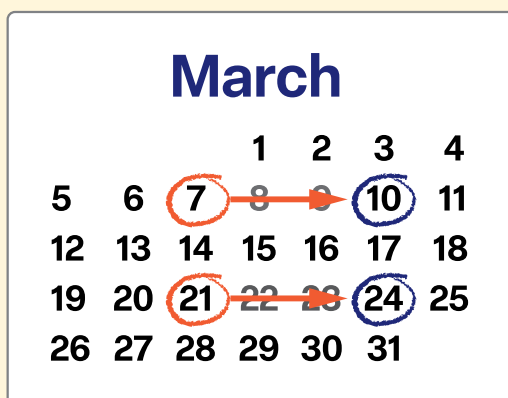

Side effects

Some people feel sick when they have chemotherapy. We call these **side effects**.

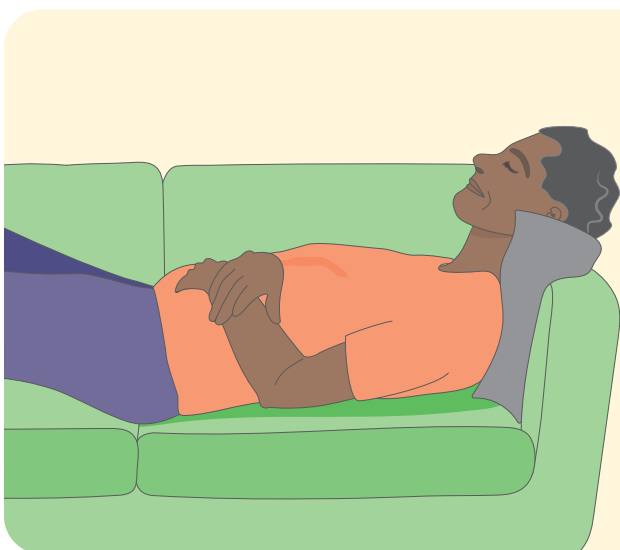

Most people do not get all the side effects.

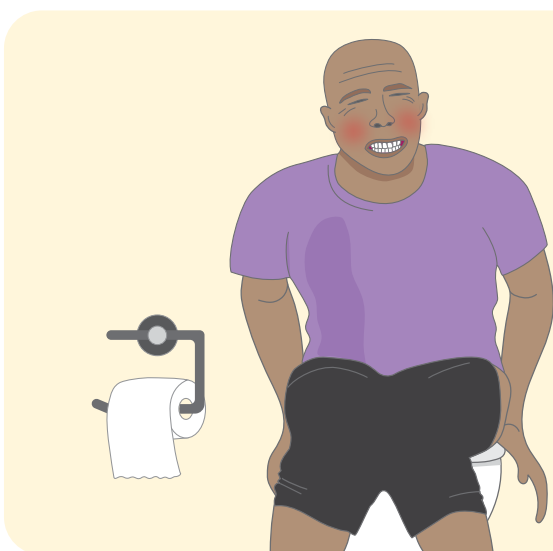

Side effects usually start a few days after you have chemotherapy.

The doctor will talk to you about side effects. They can suggest ways you can feel better.

Chemotherapy may make you feel very tired.

Some chemotherapy drugs make it hard to poo. We call this **constipation**.

You may have runny poo.
We call this **diarrhoea**.

Chemotherapy might
make you feel like
vomiting. We call this
nausea.

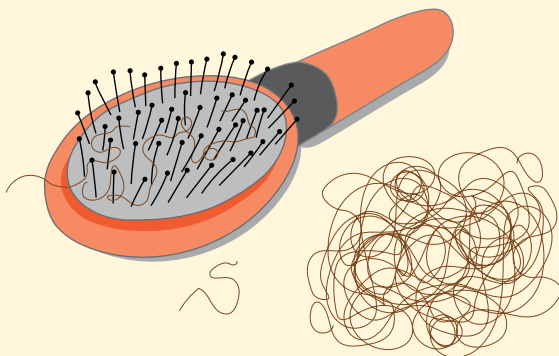

You might get sores
in your mouth.

Food may taste different. You may not enjoy eating as much.

Some chemotherapy medicines do not change your hair very much.

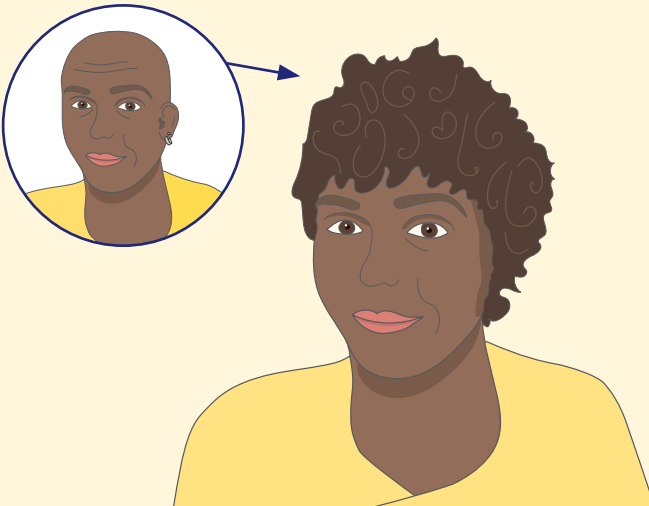

Some chemotherapy medicines make your hair fall out.

If your hair falls out, you can:

- wear a wig
- wear a headscarf
- leave your head uncovered.

Your hair will grow back when you stop chemotherapy.

You may find it hard to focus and remember things.

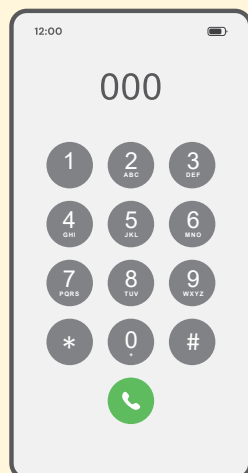

We call this **chemo brain** or **brain fog**.

Chemotherapy may make it more likely to get a cold or flu.

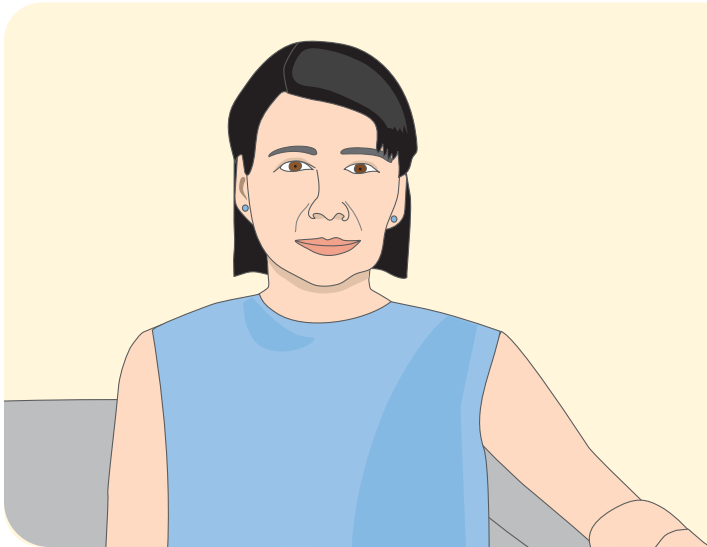

If your temperature goes over 38°C, you have a fever.

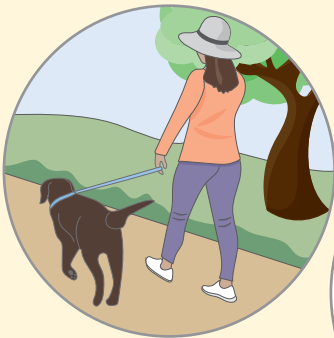

If you have a fever, call your oncologist.

If you feel very unwell, call **000** for an ambulance. The ambulance will take you to hospital.

Coping with side effects

It might take a few weeks or months for side effects to stop.

Exercise and eating healthy food can help you feel better.

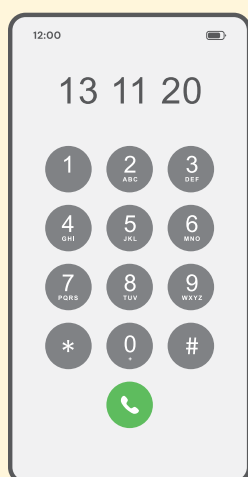

You might worry about cancer and side effects. You can talk to:

- a doctor
- your family or friends
- a counsellor.
